Raqeeb

The colleague who **never misses an update**

An AI agent that monitors regulatory and cybersecurity changes, analyzes their impact on your organization, and delivers a ready action plan.

CyberNext Initiative · Team Raqeeb

The Problem

رقيب RAQEEB

Regulations change constantly… and your company finds out too late

PROBLEM STATEMENT

Every day brings a new regulatory update, and compliance officers read hundreds of pages by hand…

one missed clause can cost the company dearly.

The gap is not just knowing an update exists; it is linking it to the company's products, processes and internal policies and deciding what actually needs to be done. **That is the difference between knowing the regulation and knowing its impact.**

Direct risks of delay

- Immediate fines
- Operations halted
- Reputational damage
- Loss of government trust and licenses

Meet Raqeeb

Raqeeb: the colleague who never misses an update

An AI agent that tracks public regulations and the company's private policies, compares versions, links every change to the company register, then delivers a justified decision and a ready action plan.

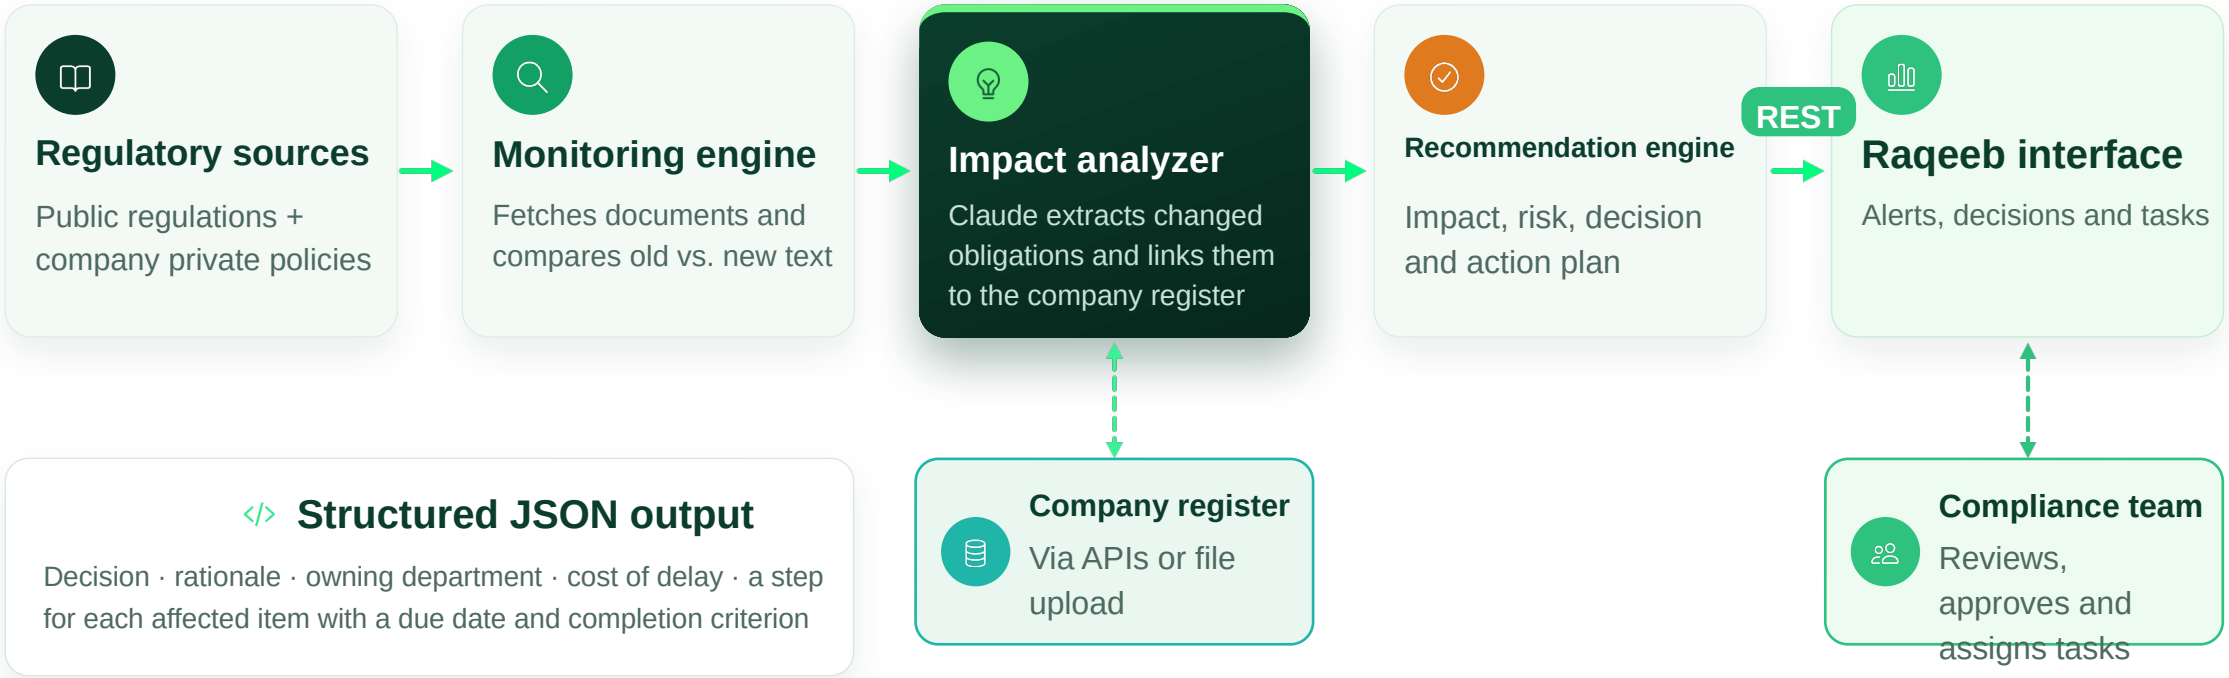

From manual tracking	**To continuous automated monitoring**
From unclear impact	**To named affected items**
From lengthy analysis	**To a decision and plan with dates and owners**

How Raqeeb Works Inside

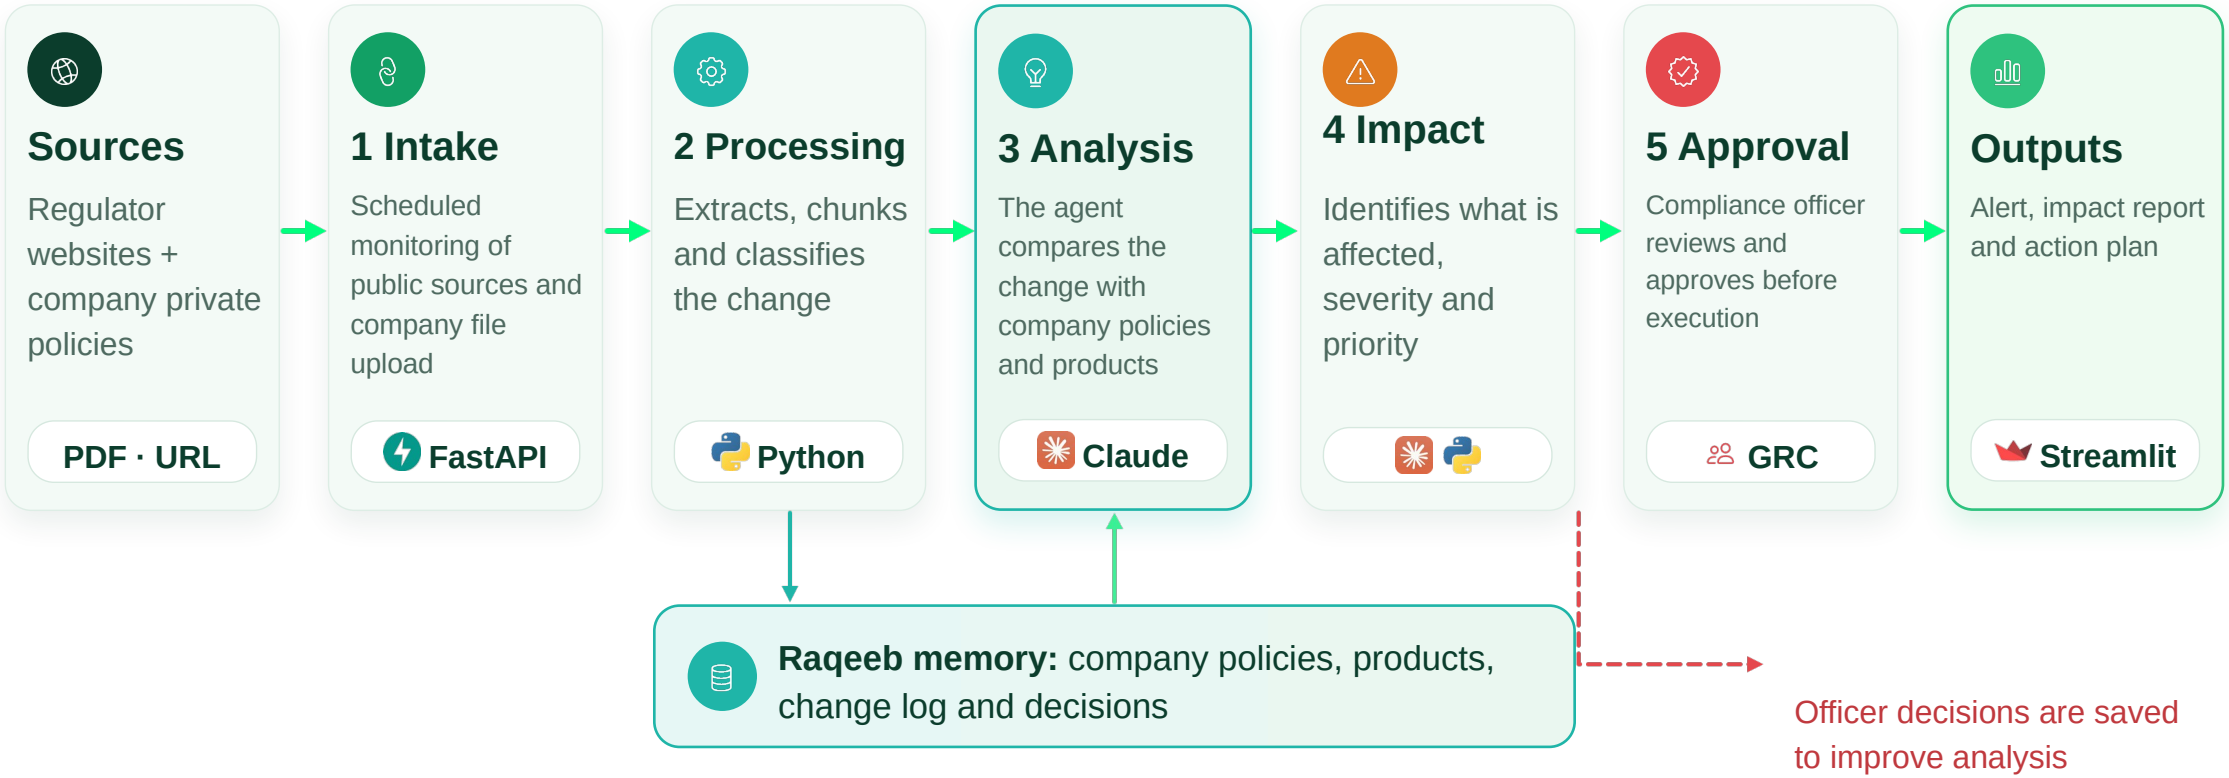

رقيب RAQEEB

Solution Architecture

Data Flow in Raqeeb

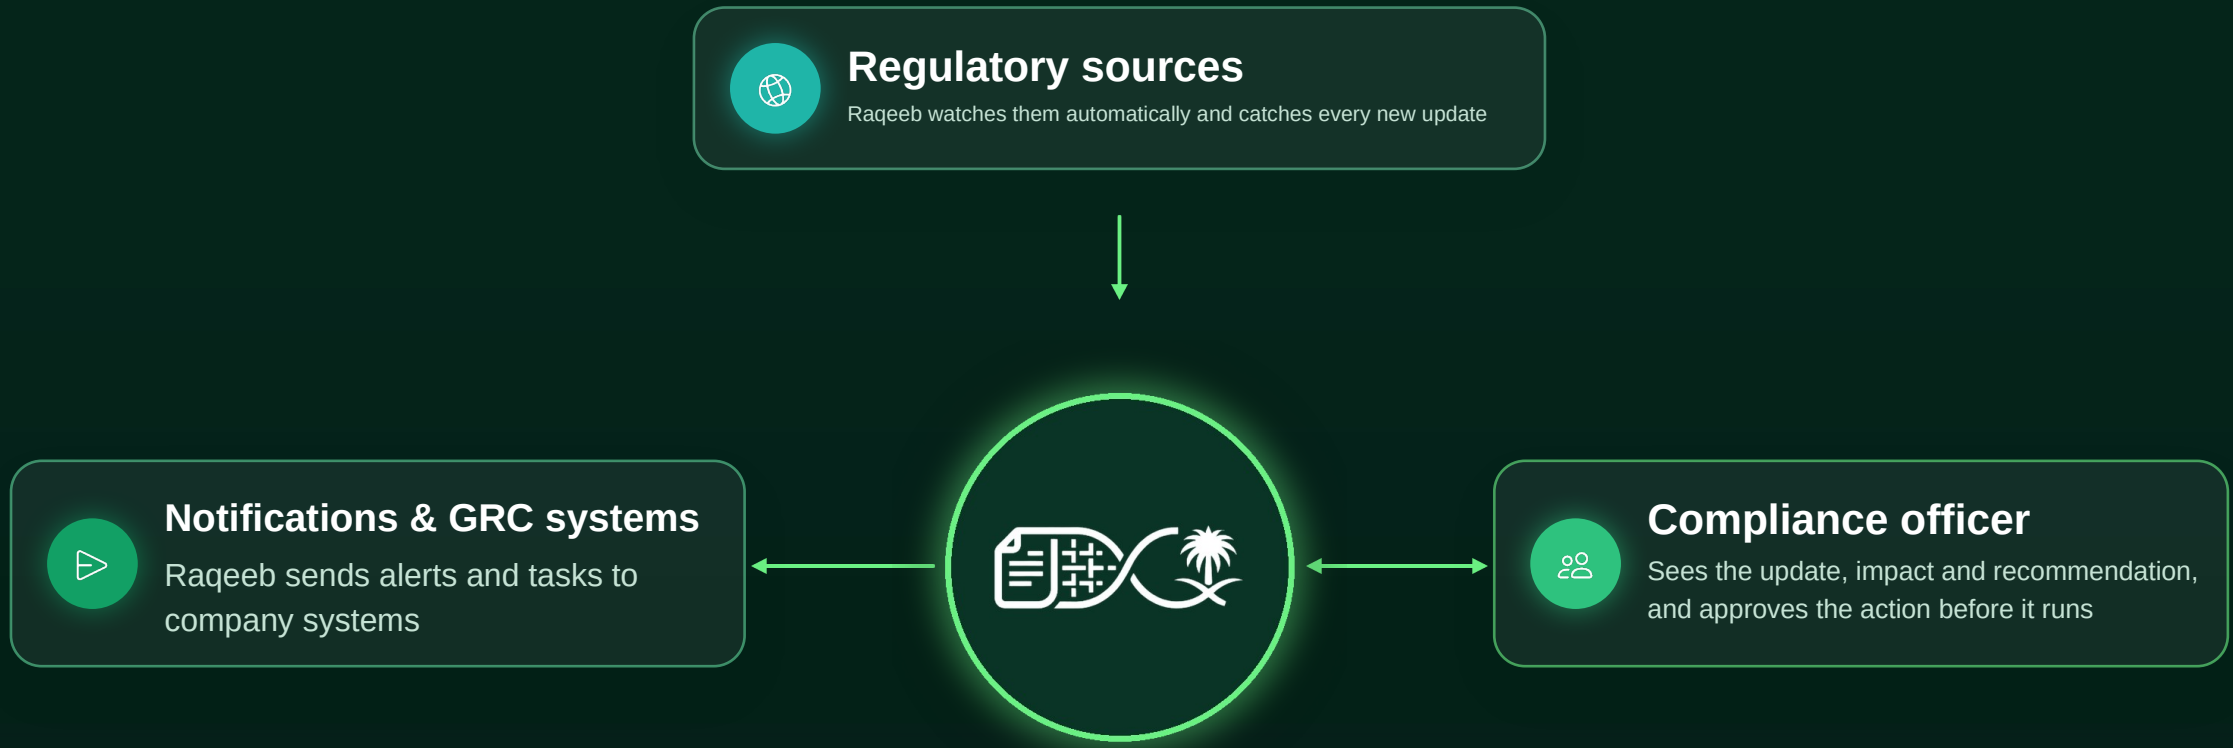

From detecting a regulatory change to an approved action plan

Data privacy: private sources are processed through a secure API or inside an isolated company-only platform

How It Interacts

Raqeeb in the middle: monitors the sources, presents to the compliance officer, and notifies systems

What Sets Raqeeb Apart

Most tools only read what is published… **Raqeeb reads the full picture and works the way your company needs.**

01 Reads what is published… and what is not

Monitors and analyzes **published regulations** from regulators, together with the company's own **private and confidential policies**.

Regulations | Internal policies | Confidential

So it finds conflicts between what regulators require and what the company actually does.

02 Two ways to run… whichever suits you

API integration with company systems, or an **Isolated platform** where company files are uploaded directly.

API integration | Isolated platform

Either way, it analyzes impact on products, policies and processes, and measures risk.

Two ways to run… one result

The company chooses how Raqeeb reaches its data… the result is the same: clear impact and measured risk.

API integration

Raqeeb connects directly to company systems, reads the product, process and policy register, and stays up to date automatically.

For large enterprises with connected systems

Isolated platform

The company uploads its files to Raqeeb in an isolated environment, with no link to internal systems.

For confidential documents, or a quick start without integration

Result either way: impact on products, policies and processes + risk measurement

Security & privacy by design

Raqeeb handles confidential compliance data, so security is built into how it runs, not added later.

Today in the prototype

- Human approval before any action runs
- Isolated per-company workspace option
- Every finding traced to its official source
- Claude API over TLS, no training on API data

Working now

Production roadmap

- In-Kingdom hosting and PDPL alignment
- Encryption, role-based access, audit logs
- Option for an on-premise / local AI model
- Raqeeb assessed against NCA ECC

Planned for deployment

Tracks NCA controls (ECC · CCC · DCC), and is built to meet them

What Changes in the Company with Raqeeb?

Raqeeb catches every regulatory change and analyzes its impact on products, policies and processes — **before it becomes a violation.**

Efficiency & performance

Before

Scattered manual checks of regulator websites

With Raqeeb

Continuous monitoring and instant alerts for every relevant change

Time & effort

Before

Days reading regulations and matching them to policies

With Raqeeb

Ready impact analysis and action plan; the team focuses on decisions

Saudi Vision 2030

Before

Compliance depends on individuals and files

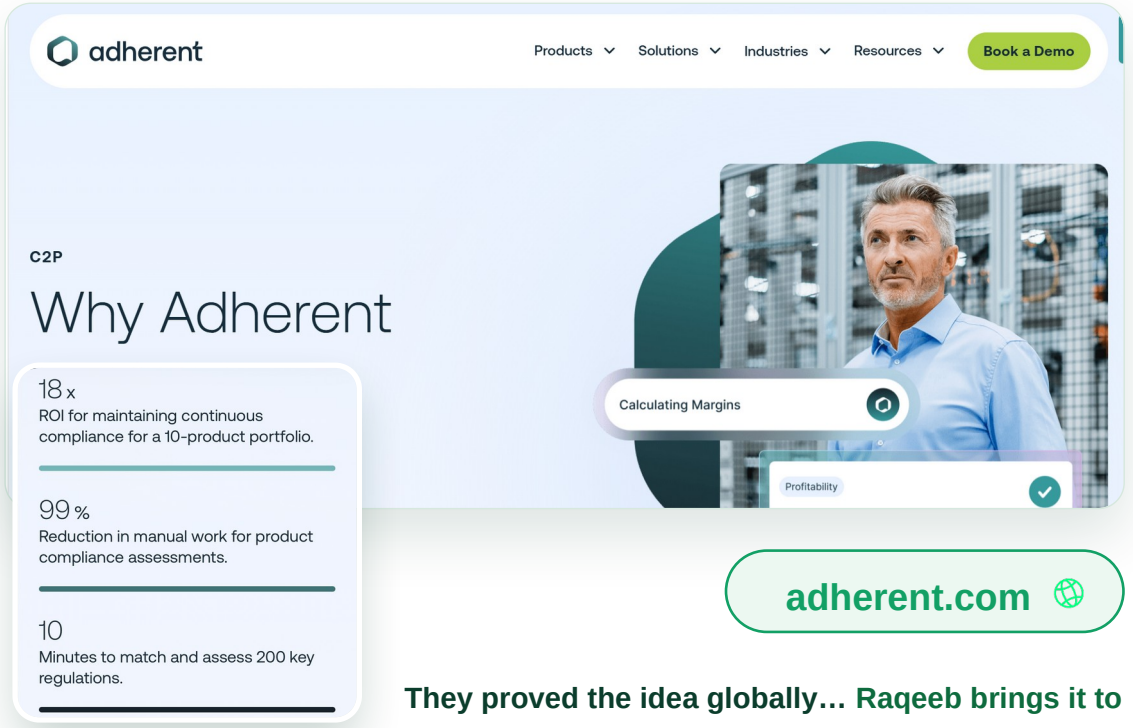

With Raqeeb

AI-automated compliance that supports digital transformation

A Globally Proven Idea: Adherent

An Irish company based in Cork with US offices applies the same idea as Raqeeb: **an AI agent that turns regulatory changes into compliance actions.**

Less audit preparation time	80%
Faster approval cycles	75%
Fewer late compliance issues	60%
Less rework	50%
Faster compliance decisions	40%

adherent.com

They proved the idea globally… Raqeeb brings it to Saudi regulations and companies' internal policies.

Raqeeb's Business Value

Documented figures from trusted external sources showing the size of the problem Raqeeb targets — **not measured results of Raqeeb itself.**

2.71×

Non-compliance costs more than compliance itself, globally

Ponemon Institute

86.8%

of non-compliance cost is operational (downtime, lost revenue, productivity), not direct fines

Ponemon Institute

70%

of compliance team capacity goes to manually tracking and processing regulatory updates

RegTech Analyst / AscentAI

10.92%

Expected annual growth of Saudi Arabia's GRC market through 2034 ($493.4M to $1,253.9M)

IMARC Group

One Screen Answers: What? Who? When?

رقيب RAQEEB

User Interface

The alert screen brings together everything the compliance team needs to decide:

1. **Alert card**
   Authority, change type, priority
2. **Text comparison**
   Old vs. new with differences highlighted
3. **Affected items**
   Product, process, policy, requirement
4. **Decision & action plan**
   One-click approval and department assignment

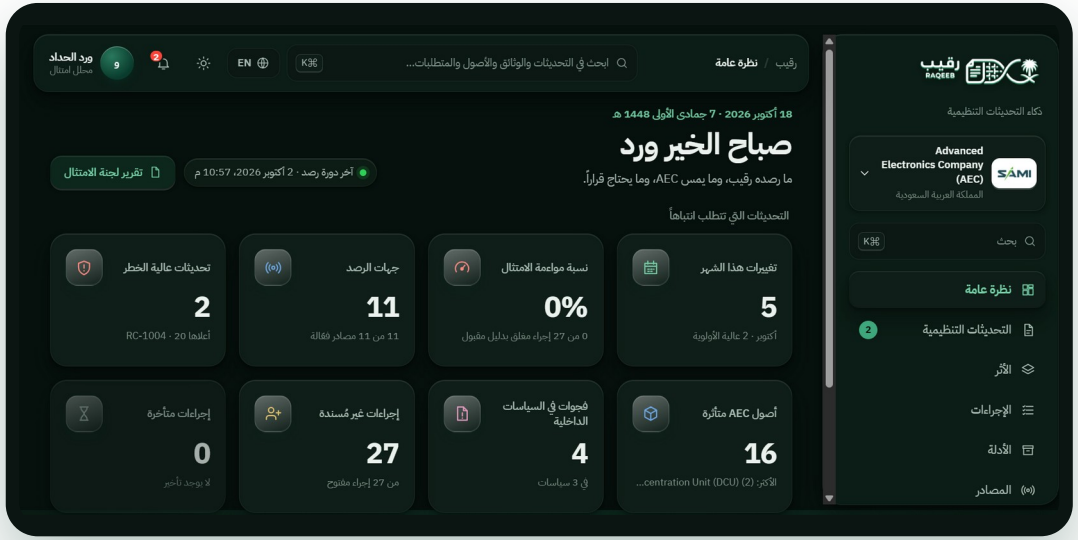

Illustrative interface design

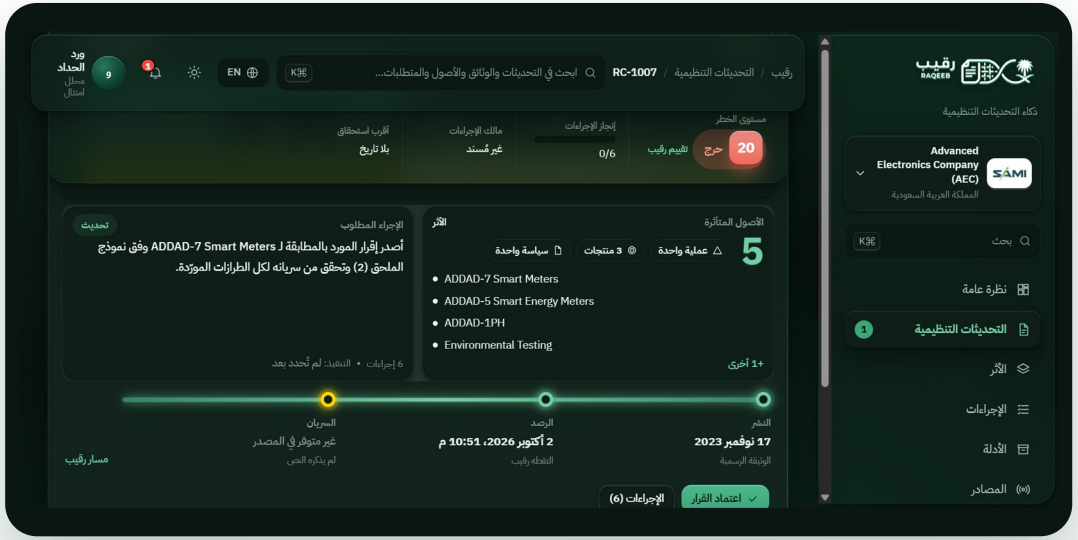

Inside the Prototype

رقيب RAQEEB

Prototype Screens

1 **Regulatory alerts dashboard**

2 **Decision & action plan page**

Working now in the prototype: private-source reading + two deployment options (API or isolated platform) · tested by 30+ users

Building the Product

From understanding the challenge to a working prototype… step by step

Start

Understand the compliance challenge

Interview a GRC officer

Design the agent architecture

Monitoring & text-diff engine

Connect Claude for impact analysis

Recommendation engine & JSON output

Private-source attachment tool

API integration & isolated platform

Raqeeb Streamlit interface

End-to-end prototype testing

Final stage

Next Steps

From a working prototype to a complete compliance system

1

Expand testing and improve the interface

Broader agent testing and user feedback to guide UX/UI improvements.

2

Direct automatic GRC integration

Turn alerts from in-app notifications into automatic pushes to the company's GRC systems.

3

Expand regulatory source coverage

Gradually add new official sources and regulations based on each sector's needs.

☆

Serve every entity under NCA and sector regulators

Track NCA controls (ECC, CCC, DCC) and sector rules, in line with Vision 2030.
